

All members signed below declare that they have completed the work they've listed below and have contributed a fair share to the project.

Luke Egan-

Shared Database design and setup workload with Ben.

Created models in the app for each of the database tables.

Created many activities involving lists and adapters.

Created functional login and register activities.

Ben Stratford-

Helped in database design and setup.

Created screen for viewing single projects.

Added ability to add members to existing projects.

Linked database to the list screen, pulling necessary info from the database.

Nicky Casey-

Activity Diagrams.

Entering of manual barcode in the scan object page.

Ui to view and create individuals.

Ui functionality to view and create equipment.

General UI style implementation.

Seán Durban-

Researched barcode scanning libraries.

Implemented scanning of barcodes.

Implemented manually inputting barcode.

Created Equipment Activity and layout.

Created Assign Activity and layout.

Updated Database entries when equipment was assigned.

Seamus Dwyer-

Designed and implemented UI for each page. After the other members of the team had created the functionality of the page. I styled the page ensuring compliance to a consistent theme. Color, spacing, icons, layout and other design features were kept to a predefined standard to ensure the UI was intuitive and user friendly. Additional work included Component Diagram and alternate back button functionality for each page.

Gavin Corkery-

Researched barcode library

Implemented some of the login functionality

Implemented new project activity and list generation activity and buttons to reach these activities

Added date picker to new equipment activity

All members partook in documentation and general bug fixing.
